VEHICLE MAINTENANCE IDENTIFICATION APPARATUS

RESTRICTION

SPECIES

This application contains claims directed to the following patentably distinct species of the claimed invention:

- I: Claims 1-12, 16-26, and 30-33; a mat for receiving vehicle fluids/emissions;
- II: Claims 13-15, 27-29, and 34; a mat for determining tire tread depth; and
- III: Claim 35; a mat for determining tire pressure.

The Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claim is generic.

The Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, the Applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, the Applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should the Applicant traverse on the ground that the species are not patentably distinct, the Applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the Examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

SUBCOMBINATIONS

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-33, drawn to a mat for receiving material exuded from a vehicle, classified in class 73, subclass 116.
- II. Claim 34, drawn to a method for only monitoring tire wear, classified in class 73, subclass 146.
- III. Claim 35, drawn to a method for monitoring tire pressure, classified in class 73, subclass 146.

The inventions are distinct, each from the other because of the following reasons:

Inventions I-III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, each invention has separate utility such as (1) identifying a substance leaked from the vehicle, (2) monitoring tire tread depth, or (3) monitoring tire pressure. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and the search required for one invention is not required for the other inventions, restriction for examination purposes as indicated is proper.

The Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
